

Patina Pattern in Nature

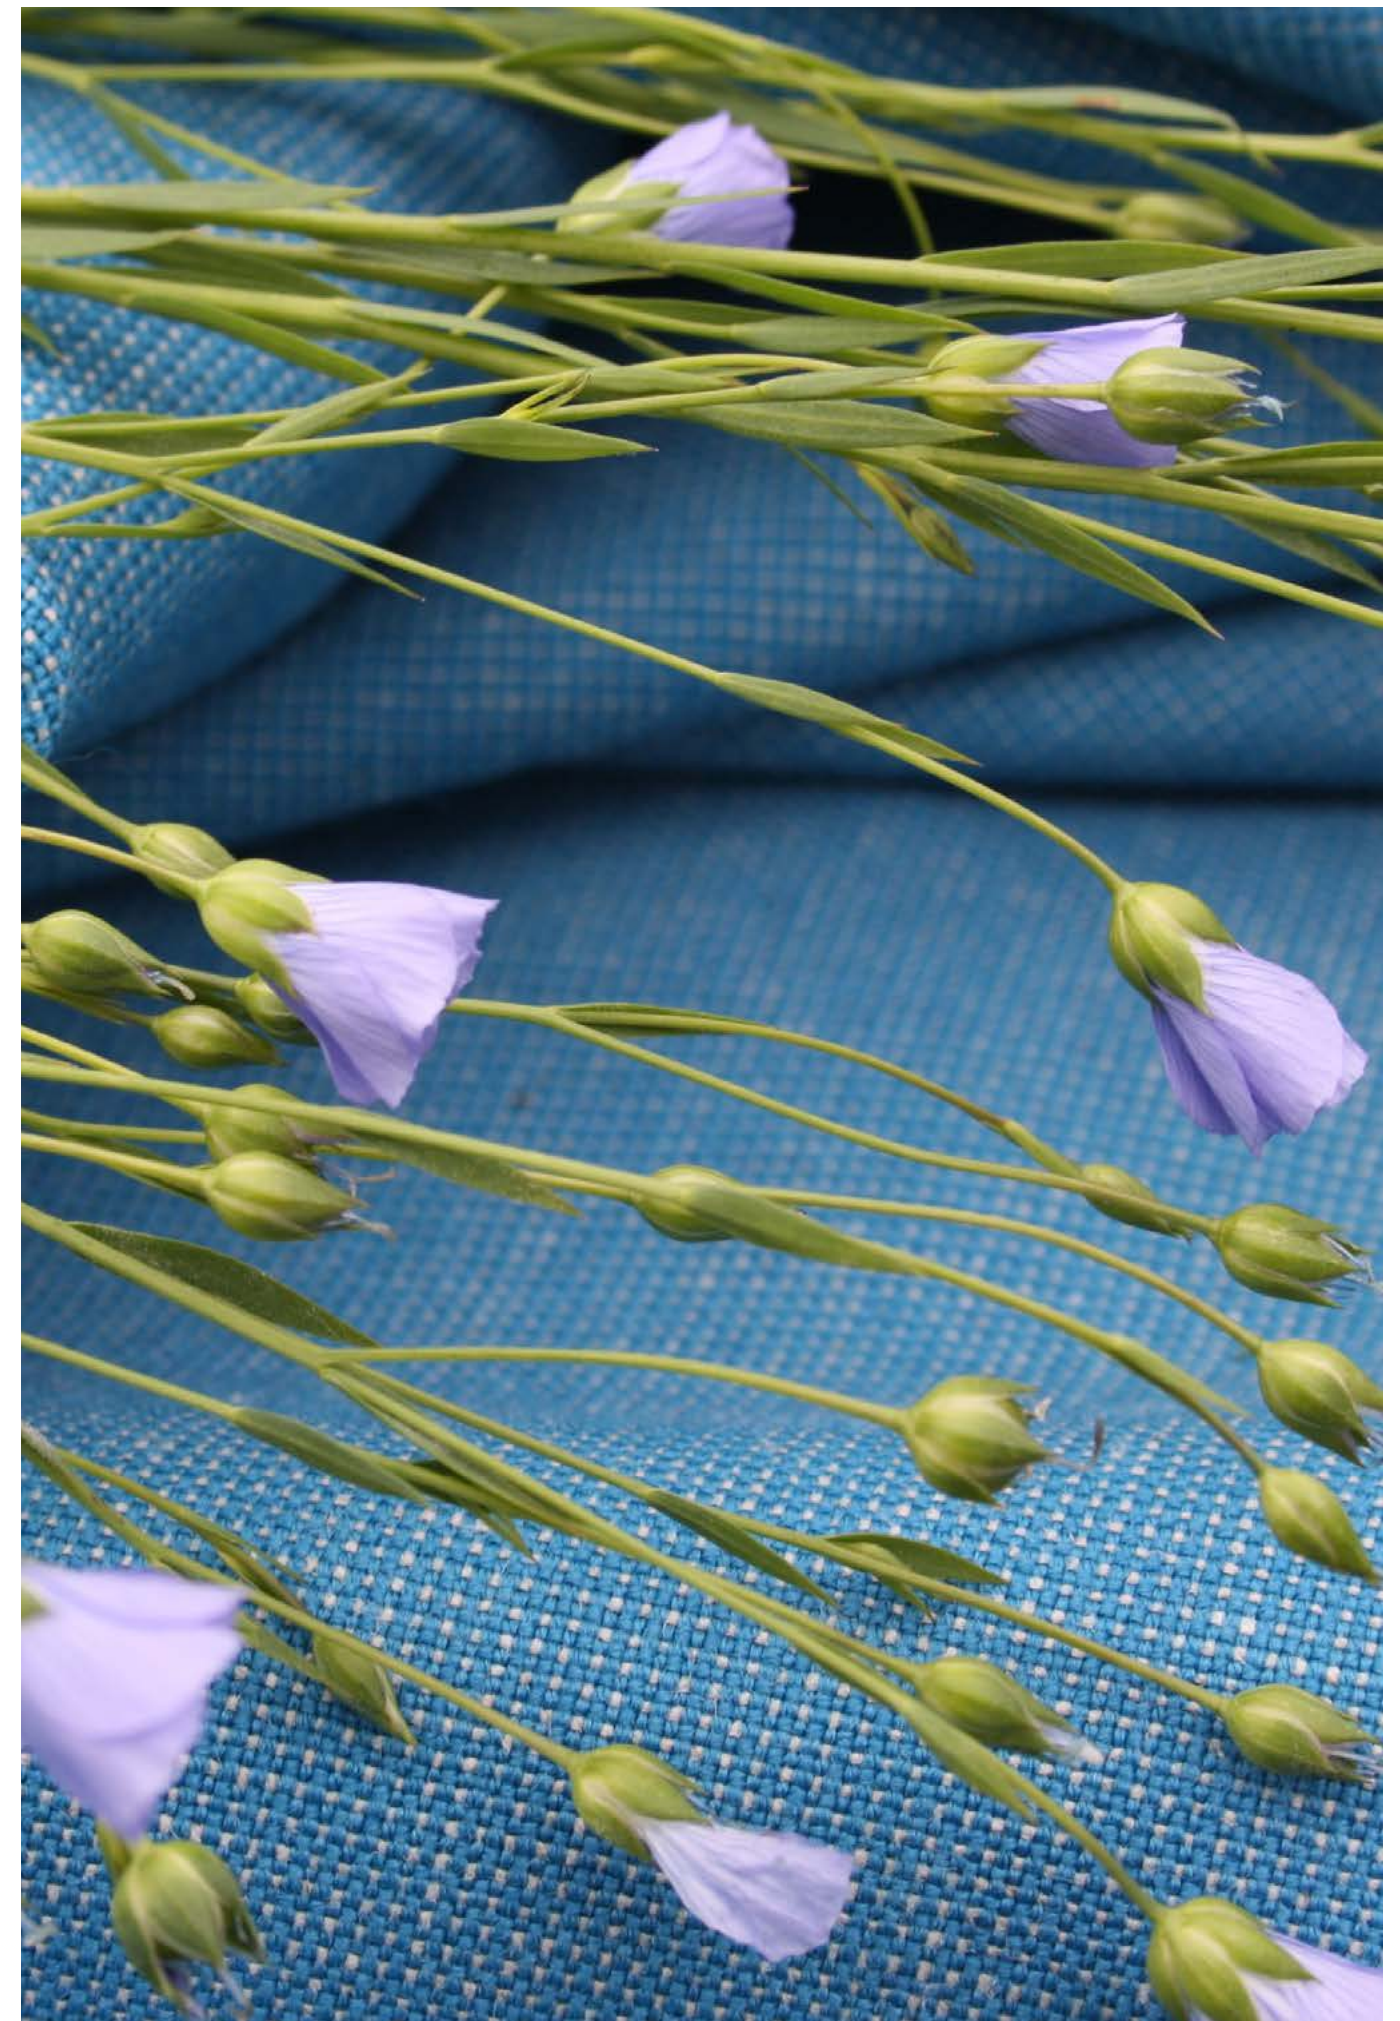

camira

Patina is an environmental fabric inspired by patterns in nature. And as nature comes back to life, Patina comes into its own, bringing warmth and depth to commercial and residential spaces for upholstery and drapery.

Woven from a blend of wool and flax, this sustainable fabric embraces its natural composition, with flashes of white flax delicately punctuating saturated tones of colour to create subtle visual detail. Suitable for use in upholstery and drapery, Patina defines simplicity and versatility.

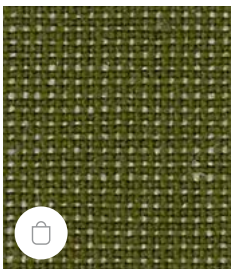

With a palette which covers the seasons, the freshest greens, punchiest corals and zest-filled oranges come together with dusk greys, heather-hued lilacs and deepest blues to create a shade selection that encompasses the spectrum.

Inherently flame retardant and achieving the highest environmental certifications, Patina epitomises designing with nature to create a fabric which blends beauty with performance.
