Camira Fabrics Limited

Samples were identified as follows:

Quality: Halcyon Linden
Run no: 346979 (2101)
Colour: Petal (HHPL01)

Laboratory Work

The tests were made in Standard Atmosphere ($65 \pm 4\%$ relative humidity at $20 \pm 2^\circ\text{C}$) the sample having been freely and continuously exposed to that atmosphere for at least 24 hours prior to testing. Specimens have been taken from the sample as described in the specified standard.

Determination of Sulphur Staining

The sample was tested in accordance with Method 22A of BS 3424: Part 19: 1989 (2016).

The face of the test specimen was compared with the original sample and the contrast between them assessed using standard grey scales for staining; 5 represents no staining and 1 severe staining.

The results for all tests are given in the table on the following page.
