

Wired

camira

# Wired

Made from 85% Wool, 15% Nylon in 17 designs

# All Wired up

Wired is a made to order collection of performance upholstery fabrics with intricate detail, created through different surface textures and weaving techniques bringing heightened texture, depth and design to transport interiors.

## Wire-woven weaving

Made from an ingenious wire-woven fabric construction using specialist jacquard looms, Wired is developed through a complex process of design and manufacture, combining both cut pile and loop pile on the same fabric surface to create complexity and intrigue to the finished fabric.

## Innovative and custom designs

Pattern and colour placement are key features to this fabric. With the added texture from the loop pile, a colour is tonally different and gives a three-dimensional illusion of additional colours and patterns throughout.

It has a very high wool content and design capability is vast, with the ability to create intricate pattern and design motifs, custom colourways and options to reflect a brand identity. As a made to order collection with 17 patterns to choose from, the design effects span illusory, graduated and delicate dappling to set a tone of poise and refinement.

## Designed by Sarah Mallinson and Ciara Crossan

Wired is the collaboration of two designers, Sarah and Ciara, who have brought specialist expertise and new creative vision to create a striking product on a traditional moquette base.

Sarah has been a designer at Camira for over 20 years. Sarah has created a huge variety of custom made fabrics for high profile global operators as well as our stocked fabrics such as Fusion and Wired.

Ciara joined Camira in 2017 as the Design Manager for Transport. Specialising in woven textiles.

Ciara has a proven track record as an innovative Brand Design Manager, setting the creative vision and working with the design studio to develop new and inspiring designs for transport interiors.
