

Rivet.

**A fixating fabric
made from 100%
post-consumer
recycled polyester.
Rivet celebrates over
20 years of recycled
fabrics from Camira.**

camira

Rivet is a captivating fabric which not only connects seamlessly with the modern collaborative workplace, but also forms a bridge between textile traditions and future innovation.

Designed to blend the aesthetic qualities of luxury woollen apparel with modern performance sportswear, Rivet is a fabric creation borne out of the development of an entirely new yarnstring made from 100% REPREVE® fiber, created from recycled PET bottles. The new yarn was developed exclusively for Camira, and the fabric is woven at Camira's UK manufacturing plant into a lightly textured, hopsack construction which emulates the swathe and sheen of sophisticated suiting in a well-heeled synthetic.

Every year millions of plastic bottles end up in landfill, impacting our environment. PET bottles are taken and given a new life in the form of REPREVE® yarn.

REPREVE® is a registered trademark of Unifi, Inc.

Unifi, a leading global producer and processor of polyester and nylon textured yarns, developed a proprietary process to transform recycled plastic bottles into REPREVE® fiber, an eco-friendly fabric ingredient.

REPREVE® is made by transforming polyethylene terephthalate (PET) from recycled plastic bottle flake, which has the same chemistry as polyester. (PET bottles have a #1 symbol.)

Over 15 billion recycled plastic bottles have been transformed into REPREVE® through a process that involves melting bottle flake into resin, then extruding it into fiber that is spun and textured to create a variety of yarns used in thousands of different fabrics and products available globally.

One of which is Rivet.

Did you know:

- Just 20 plastic bottles (18 fl oz) make one yard of fabric.
- 23,151 plastic bottles (18 fl oz) make one ton of Rivet yarn which when woven equates to 1,150 yards of fabric.

That's a whole lot of post-consumer fabric, all made from recycled plastic bottles.

With 33 colors to choose from, the Rivet palette unveils duotone coloration, inviting you to delve deeper to see the color detail.

The yarn is made from a combination of colors, a black base combined with one or more colors to give a final shade, which creates the *mélange* effect seen throughout each colorway.

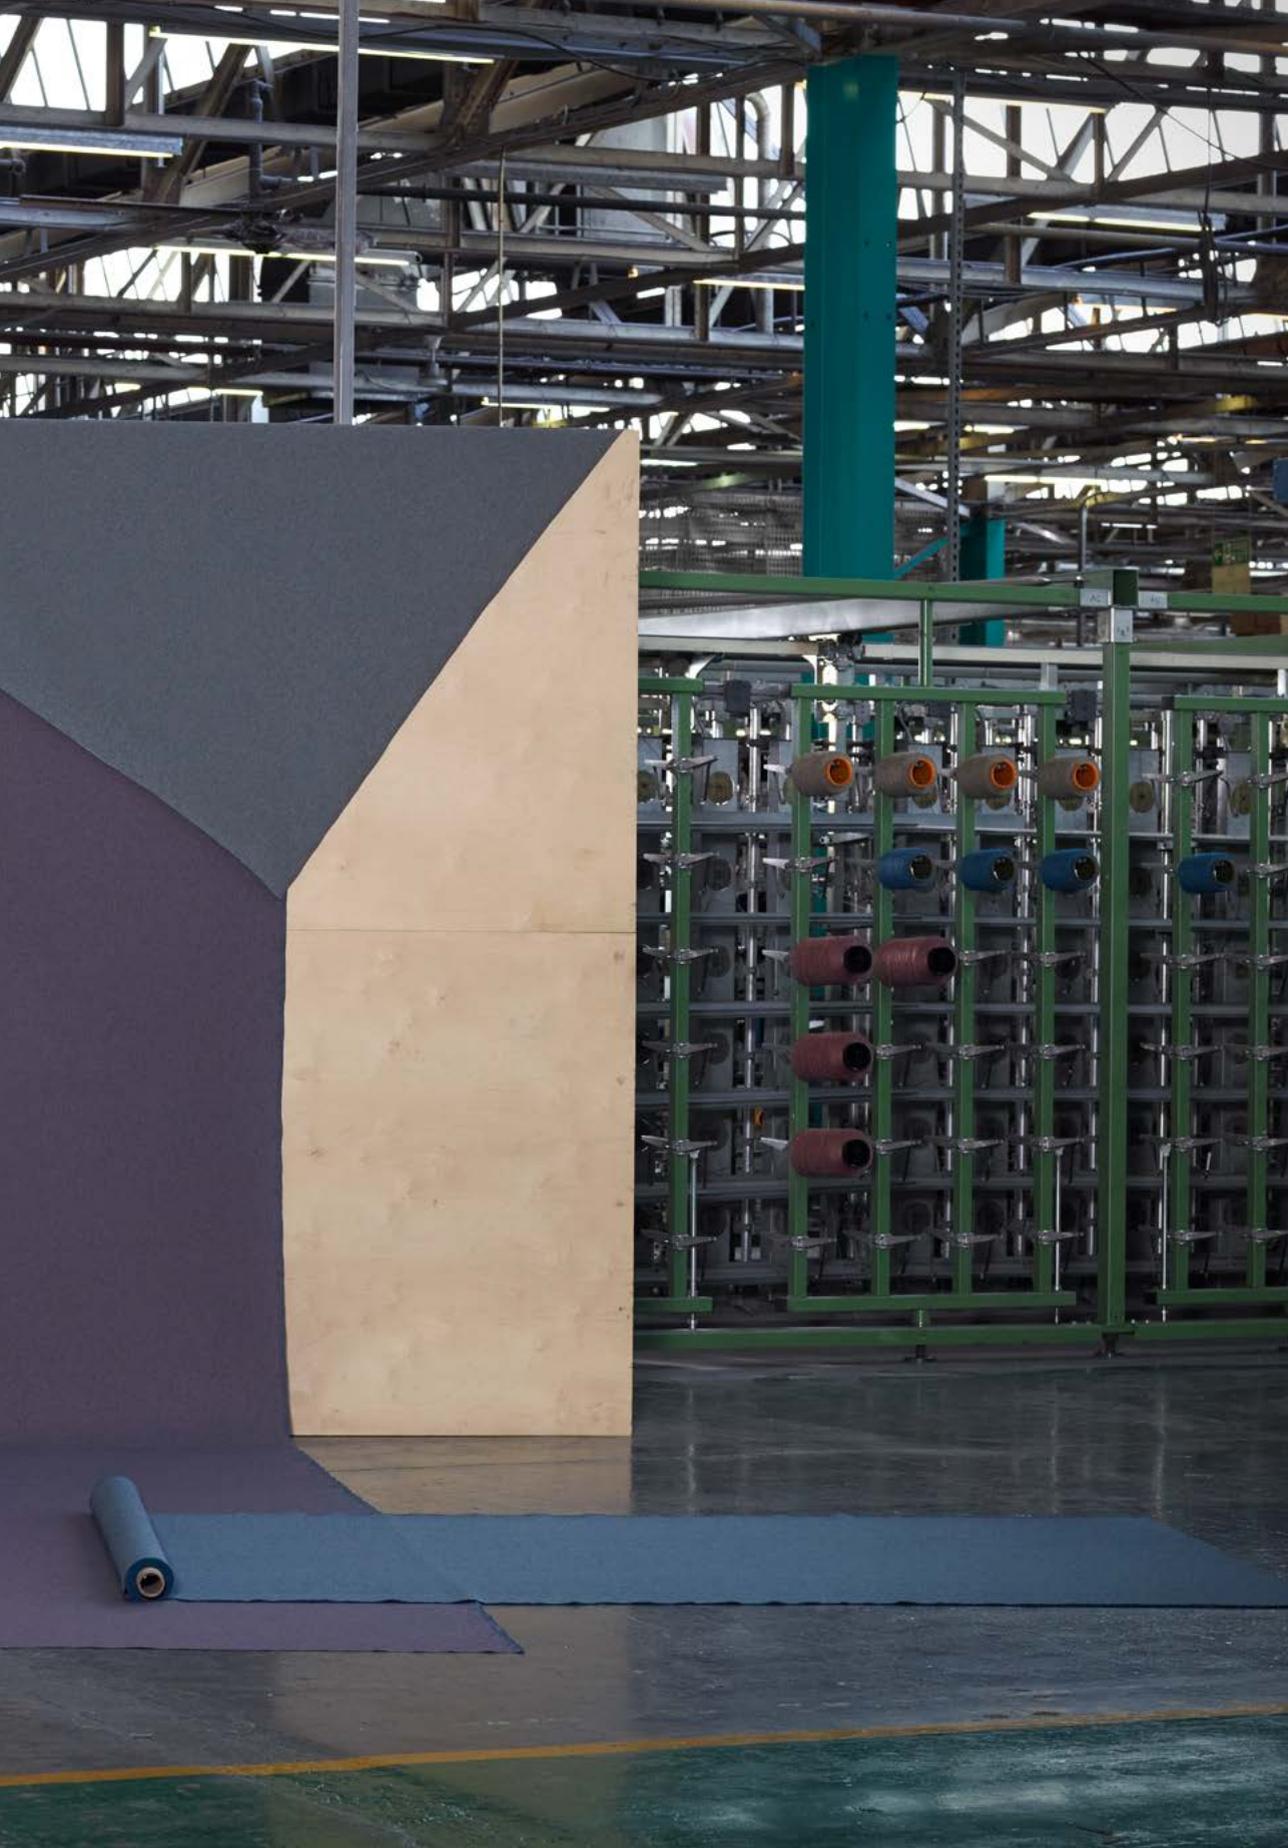

The contemplative palette is made from 13 yarns and through different combinations, mixing and coordinating, new colors have been created. The hopsack weave allows for a textured pattern without compromising the overall color direction.

With muted, tonal shades and bold, darker colors, the palette has been developed to coordinate with other ranges from Camira, so there are no holds barred when it comes to pushing new boundaries for creating dynamic interior schemes.

Rivet marks a milestone for Camira as the pinnacle in over 20 years experience of manufacturing recycled fabrics.

It all actually began with an innovative recycled wool called ReSKU, made from upcycled army jumpers pulled back to fibre, spun into yarn and woven into fabric. The recycled polyesters started soon after, first with Terratex then Second Nature branded fabrics signalling environmental textiles using 100% post-consumer or 100% post-industrial fibre sources.

We re-engineered our bestselling Xtreme fabric from virgin to recycled polyester, then innovated a new process to utilise waste yarn remnants and selvedge waste to create fully closed loop recycled fabrics.

So Rivet descends from a rich pedigree of recycled forebears, connecting comfortably with the past, yet representing a new generation of today's best in class.
